

PURCHASING

At Sovex we strive to provide our clients with the very best solutions through our flexible, customer-focused approach.

We offer the option to hire or rent machines and equipment as well as purchase, which proves a more cost-effective solution for some of our clients.

RENTAL

Hiring machines is an ideal, cost-effective solution for meeting peak or seasonal demands with no capital outlay. We offer short or long term hire of static vehicle loaders.

All rental units will be covered by our maintenance agreement and regular services will be carried out free of charge during the rental period. Breakdown cover is also included, covering all everyday wear and tear. We can also provide full technical support throughout the rental agreement.

LEASING

Sovex offer leasing plans on all equipment which has proved to be very popular due to the extensive benefits offered to the customer.

Customers benefit from the easy to monitor monthly, quarterly or annual direct debit payments and they avoid the pressure of large capital outlay. Leasing is also tax efficient as payments may be deducted from taxable profits, lowering the net cost of leasing our equipment.

An added bonus is our 100% financing plan which means that there is no deposit necessary, just regular agreed payments over the life of the contract. All of our leasing arrangements are underwritten by Siemens Financial Services, giving you peace of mind when choosing to invest in Sovex equipment.

We can also provide extra parts – including corners, bends, merges, gate sections, stops, transfers and accumulation, to maximise the functionality of your conveyor.

At Sovex, we look forward to meeting your needs; keeping your business moving.

REFURBISHMENT

Sovex are also in a unique position to offer a full or part refurbishment on machinery, including all telescopic conveyors. We will remove your conveyors from site and can even provide a temporary replacement where necessary.

We can also offer re-furbished units to buy. Our 'for sale' refurbished units are renovated to the same high specifications as our new machines, including:

- Full electrical re-wiring
- Replacement rollers and bearings
- New belt
- Full re-spray in the colour of your choice

Also included in the refurbishment, Sovex have developed a new front end which removes the old push bar arrangement, eliminating a large percentage of downtime.

To complement this, our Spares Department can also supply a comprehensive range of parts at very competitive prices.

At Sovex, we look forward to meeting your needs; keeping your business moving.
