

TELESCOPIC VEHICLE LOADERS

Sovex believe in efficiency, durability and consistency in our business, our customer service and most importantly in our products.

For the last 50 years we have been designing, manufacturing and servicing conveyors and storage equipment in the UK.

All of our machinery meets with industry standard requirements and, with our team of specialists working together with our clients, we also pride ourselves in our capability of designing bespoke models to meet individual specifications.

One of our unique designs is our Telescopic Vehicle Loader.

All of our Vehicle Loaders incorporate the following features as standard:

- Unique Sovex designed chassis
- Front halogen lighting
- Electrically interlocked pop out roller at the front end
- Belt soft start
- Roller shrouds to avoid nipping points
- Front safety buffer.

With your Sovex Telescopic Vehicle Loader not only will you reduce time in loading and unloading your vehicles but you are also looking after your staff's needs by lessening the load of labour and avoiding potential Health and Safety implications. You will notice the difference immediately as your throughput increases alongside your turnover. Customers are offered flexible options of

either purchasing a machine as new, having current machines refurbished, or renting the conveyors. We are confident that, whichever option is taken, you will not be disappointed with the product or service provided.

With our fleet of service engineers on the road every day, we are always on hand should you need us, as we offer a year's warranty and servicing contracts to keep your conveyor in perfect working order. We are sure you will find our conveyors are able to withstand most working environments, but unique design ensures that any maintenance can be undertaken with minimum disruption.

At Sovex, we look forward to meeting you and your needs; keeping your business moving.
