

VAN LOADERS

Sovex Systems' mobile Van Loader provides a safe, convenient means of loading and unloading a wide range of vehicles without the need for a loading bay.

The Van Loader features a powered, flexible roller conveyor mounted on an inclined belt conveyor. Parcels travel up the belt conveyor and transfer automatically onto the roller conveyor, which extends into the vehicle and transports them smoothly to the operator for loading. As the vehicle fills, the operator can retract the roller conveyor to maintain a comfortable working position. Travel direction is reversible to allow both loading and unloading.

With the Van Loader, users can improve loading and unloading times, increasing throughput. It cuts manual handling requirements, reducing the risk of injury and making for a safer working environment. The unit is easily manoeuvrable to suit multi-door applications and is height adjustable, which makes it ideal for use with non-standard vehicles.

Easy to set up, the Van Loader has a heavy-duty chassis, making it robust and hardwearing. Simple, conveniently located controls make it easy to operate.

VAN LOADER SPECIFICATIONS

	Flex Closed (mm)	Flexible Outreach (mm)	Belt Width (mm)
VL-7.5-600	3000	7500	600
